

Packet Tracer - Configure Router-on-a-Stick Inter-VLAN Routing

Name: Danica Marie A. Dumalagan

Date: March 2, 2023

Addressing Table

Device	Interface	IPv4 Address	Subnet Mask	Default Gateway
R1	G0/0.10	172.17.10.1	255.255.255.0	N/A
	G0/0.30	172.17.30.1	255.255.255.0	
PC1	NIC	172.17.10.10	255.255.255.0	172.17.10.1
PC2	NIC	172.17.30.10	255.255.255.0	172.17.30.1

Objectives

Part 1: Add VLANs to a Switch

Part 2: Configure Subinterfaces

Part 3: Test Connectivity with Inter-VLAN Routing

Scenario

In this activity, you will configure VLANs and inter-VLAN routing. You will then enable trunk interfaces and verify connectivity between VLANs.

Instructions

Part 1: Add VLANs to a Switch

Step 1: Create VLANs on S1.

Create VLAN 10 and VLAN 30 on **S1**.

Step 2: Assign VLANs to ports.

- Configure interfaces F0/6 and F0/11 as access ports and assign VLANs.
 - Assign the port connected to **PC1** to VLAN 10.
 - Assign the port connected to **PC3** to VLAN 30.
- Issue the **show vlan brief** command to verify VLAN configuration.

S1# **show vlan brief**

```

VLAN Name                Status    Ports
-----
1    default                active    Fa0/1, Fa0/2, Fa0/3, Fa0/4
                                   Fa0/5, Fa0/7, Fa0/8, Fa0/9
                                   Fa0/10, Fa0/12, Fa0/13, Fa0/14
  
```

		Fa0/15, Fa0/16, Fa0/17, Fa0/18
		Fa0/19, Fa0/20, Fa0/21, Fa0/22
		Fa0/23, Fa0/24, Gig0/1, Gig0/2
10	VLAN0010	active Fa0/11
30	VLAN0030	active Fa0/6
1002	fddi-default	active
1003	token-ring-default	active
1004	fddinet-default	active
1005	trnet-default	active

Step 3: Test connectivity between PC1 and PC3.

From **PC1**, ping **PC3**.

Were the pings successful? Why did you get this result?

No, because PC1 and PC3 belong to different VLANs

Part 2: Configure Subinterfaces

Step 1: Configure subinterfaces on R1 using the 802.1Q encapsulation.

- Create the subinterface G0/0.10.
 - Set the encapsulation type to 802.1Q and assign VLAN 10 to the subinterface.
 - Refer to the **Address Table** and assign the correct IP address to the subinterface.

```
R1(config)# int g0/0.10
```

```
R1(config-subif)# encapsulation dot1q 10
```

```
R1(config-subif)# ip address 172.17.10.1 255.255.255.0
```

- Repeat for the G0/0.30 subinterface.

Step 2: Verify Configuration.

- Use the **show ip interface brief** command to verify subinterface configuration. Both subinterfaces are down. Subinterfaces are virtual interfaces that are associated with a physical interface. Therefore, in order to enable subinterfaces, you must enable the physical interface that they are associated with.
- Enable the G0/0 interface. Verify that the subinterfaces are now active.

Part 3: Test Connectivity with Inter-VLAN Routing

Step 1: Ping between PC1 and PC3.

From **PC1**, ping **PC3**. The pings should still fail. Explain.

A trunk port has not yet been configured.

Step 2: Enable trunking.

- On **S1**, issue the **show vlan** command.

What VLAN is G0/1 assigned to?

VLAN 1 default

- Because the router was configured with multiple subinterfaces assigned to different VLANs, the switch port connecting to the router must be configured as a trunk. Enable trunking on interface G0/1.

Packet Tracer - Configure Router-on-a-Stick Inter-VLAN Routing

How can you determine that the interface is a trunk port using the **show vlan** command?

G0/1 is not listed in the show vlan list

- c. Issue the **show interface trunk** command to verify that the interface is configured as a trunk.

Step 3: Test Connectivity

If the configurations are correct, PC1 and PC3 should be able to ping their default gateways and each other.

What addresses do PC1 and PC3 use as their default gateway addresses?

Both are using the IP addresses of the subinterface

Part 4: Post your screenshots

On the PT Activity window, make sure that the completion grade is **100%**. Click on the **Check Results** button and select the **Assessment Items** tab. Take a screen shot of the whole window, showing the table of assessment items, and the score/item count. Own your photo by placing a watermark on your photo with your name and USC ID Number. Paste your screenshot below:

The screenshot shows the Cisco Packet Tracer Activity Results window for the task "Configure Router-on-a-Stick Inter-VLAN Routing.pka". The window displays a table of assessment items and a summary of scores.

Assessment Items Table:

Assessment Items	Status	Points	Component(s)	Feedback
Network				
R1				
Ports				
GigabitEthernet0/0		0	Other	
Port Status	Correct	5	Inter-VLAN Ruti...	
GigabitEthernet0/0.10				
802.1Q		0	Other	
VLAN ID	Correct	5	Inter-VLAN Ruti...	
IP Address	Correct	5	Inter-VLAN Ruti...	
Subnet Mask	Correct	5	Inter-VLAN Ruti...	
GigabitEthernet0/0.30				
802.1Q		0	Other	
VLAN ID	Correct	5	Inter-VLAN Ruti...	
IP Address	Correct	5	Inter-VLAN Ruti...	
Subnet Mask	Correct	5	Inter-VLAN Ruti...	
S1				
Ports				
FastEthernet0/11		0	Other	
Access VLAN	Correct	5	VLAN Configur...	
FastEthernet0/6		0	Other	
Access VLAN	Correct	5	VLAN Configur...	
GigabitEthernet0/1		0	Other	
Port Mode	Correct	5	Trunking Configu...	
VLANs				
VLAN 10		0	Other	
VLAN Name	Correct	5	VLAN Configur...	
VLAN 30		0	Other	
VLAN Name	Correct	5	VLAN Configur...	

Summary Table:

Component	Items/Total	Score
Inter-VLAN Routing Configuration	7/7	35/35
Trunking Configuration	1/1	5/5
VLAN Configuration	4/4	20/20

Score: 60/60
Item Count: 12/12
